

## **PROFESSIONAL SUMMARY**

Senior Software Engineer with 8+ years of experience architecting, building, and operating enterprise web and cloud-native applications across the full software development lifecycle, spanning financial services, Insurtech, and edtech environments. Deep expertise in C#, .NET Core/.NET Framework, ASP.NET Core, Entity Framework Core, and Angular/TypeScript, with hands-on delivery on Microsoft Azure and AWS. Proven track record owning complex, business-critical features end-to-end from ambiguous requirements and technical design through implementation, testing, deployment, observability, and production support while making sound architectural trade-offs around performance, scalability, security, and maintainability. Recognized for diagnosing complex cross-system issues, driving measurable performance and reliability improvements, and raising engineering quality through rigorous code review and mentorship. Effective collaborator with distributed Product, QA, Design, and Engineering teams in fast-paced Agile/Scrum environments; an early adopter of AI-assisted development workflows (GitHub Copilot, Claude Code, Cursor) to accelerate delivery without compromising code quality or review discipline.

## **SKILLS AND COMPETENCIES**

- **Languages:** C#, TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3, VB.NET, and Python
- **Backend & .NET:** .NET Core, .NET Framework, ASP.NET Core, ASP.NET MVC/Web API, Entity Framework/Core, LINQ, RESTful APIs, Microservices, Razor, Blazor, Clean Architecture, CQRS, Domain-Driven Design, SOLID Principles, Design Patterns
- **Frontend:** Angular (2–17), React, Node.js, RxJS, NgRx, Angular Material, Bootstrap, Tailwind CSS, jQuery, Responsive & Component-Driven UI Design
- **Databases:** Microsoft SQL Server, PostgreSQL, Oracle, T-SQL, Query Optimization, Database Design & Normalization; familiarity with MongoDB and Redis
- **Cloud & Infrastructure:** Microsoft Azure (App Service, Functions, Azure SQL, Service Bus, Key Vault, Application Insights), AWS (EC2, S3, Lambda, RDS), Docker, containerization fundamentals, Infrastructure as Code awareness (ARM/Bicep, Terraform)
- **DevOps & Tooling:** Azure DevOps, CI/CD Pipeline Design, Git, GitHub, TFS, Release Management, Environment Configuration, Build/Deployment Automation
- **APIs & Integration:** RESTful Web Services, SOAP, GraphQL, JSON, XML, OAuth2/JWT, Swagger/OpenAPI, Third-Party & Payment Gateway Integration, Message Queues
- **Testing & Quality:** Unit & Integration Testing (xUnit, NUnit, MSTest), Selenium, Postman, SoapUI, TDD Practices, Accessibility Testing (WCAG/AODA), Code Coverage
- **Security & Reliability:** OWASP Top 10 Awareness, Secure Coding Practices, Application Performance Monitoring, Logging & Observability (Application Insights, Serilog), Incident Root-Cause Analysis
- **AI-Assisted Development:** GitHub Copilot, Claude Code, Cursor for codebase analysis, technical design, debugging, refactoring, test generation, and documentation
- **Engineering Practices & Leadership:** Agile/Scrum, System Architecture & Technical Design, Code Review, Performance Optimization, Technical Documentation, Cross-Functional Collaboration, Mentorship & Team Leadership, Stakeholder Communication

## **EDUCATION AND CERTIFICATIONS**

- **Master of Science, Information Technology** | National Open University of Nigeria – 2019
- **Bachelor of Science, Computer Science**, University of Benin – 2014
- **Microsoft Certified: Azure Developer Associate** – 2023
- **ITIL 3 (Information Technology Infrastructure Library)** – 2019

## **PROFESSIONAL EXPERIENCE**

**Software Engineer (Contract) | KnowledgeHook Inc.**

**May 2024 – Present**

### **Job Responsibilities:**

- Own complex full-stack features end-to-end from requirements and technical design through development, testing, deployment, and production support using C#, ASP.NET Core, Entity Framework Core, Angular, TypeScript, REST APIs, and SQL Server, consistently delivering on sprint commitments in a fast-paced edtech product environment.
- Design and enhance RESTful APIs, backend services, relational data models, and Entity Framework Core queries, weighing trade-offs around performance, scalability, maintainability, security, and backward compatibility to support a growing user base.
- Architect solutions spanning Angular applications, .NET backend services, APIs, SQL Server databases, scheduled/background jobs, and notification workflows, proactively identifying cross-system dependencies and technical risk before implementation begins.
- Investigate complex application and API performance issues across system boundaries using APM tooling, structured logging, SQL analysis, and EF Core query diagnostics, resolving bottlenecks that improved response times and reduced production incidents.
- Author detailed Technical Design Documents (TDDs) translating evolving product requirements into implementation-ready designs covering architecture, database changes, API contracts, background processing, security, observability, edge cases, testing, and rollout strategy.
- Partner with Product Owners, QA, Design, and engineering stakeholders to clarify ambiguous requirements, evaluate trade-offs, decompose complex initiatives into deliverable milestones, and surface implementation risk early to protect delivery timelines.
- Conduct thorough peer code reviews and help shape engineering standards around maintainability, performance, automated testing, accessibility, and secure application development.
- Championed adoption of AI-assisted development tools (GitHub Copilot, Claude Code, Cursor) for codebase analysis, technical design, debugging, refactoring, test generation, and documentation, independently validating AI-generated output through rigorous testing and peer review to maintain code quality.

**Software Engineer | Twenty7Tec**

**January 2023 – May 2024**

### **Job Responsibilities:**

- Designed, developed, automated, and debugged backend services and application components for a UK-based insurtech platform, delivering scalable, maintainable, high-performance solutions aligned with business and technical requirements.
- Led and contributed to architectural discussions and technical decision-making, evaluating implementation trade-offs and helping evolve application architecture to support current and future product roadmap requirements.
- Owned enhancements to existing applications end-to-end, translating business requirements into technical solutions that improved performance, maintainability, reliability, and overall user experience.
- Diagnosed and resolved complex, cross-cutting application issues and proactively identified opportunities to improve code quality, system reliability, and development processes across the team.
- Conducted rigorous peer code reviews focused on correctness, maintainability, performance, testability, and adherence to team engineering standards, helping raise the overall bar for code quality.
- Collaborated closely with Product Owners, QA, designers, and engineers in an Agile environment to clarify requirements, scope work accurately, flag technical risk early, and consistently deliver production-ready features.
- Mentored junior engineers through code reviews, technical guidance, and pairing on complex problems, supporting their professional growth and strengthening overall team engineering capability.

**Technical Instructor (Part-Time Contract) | HiCounselor****April 2022 – February 2023****Job Responsibilities:**

- Produced technical video curriculum covering .NET Framework and Angular 13, contributing to a comprehensive, engaging learning experience for aspiring software engineers.
- Delivered interactive live sessions combining lectures, discussions, live coding, and hands-on project-based learning to build practical, job-ready skills.
- Assessed student progress using varied evaluation methods and provided constructive, actionable feedback to drive continuous improvement and mastery of course material.
- Adapted teaching methods to diverse learning styles and experience levels, tailoring instruction to maximize comprehension and long-term retention.

**Software Engineer (Contract) | DXC Technology****March 2022 – December 2022****Job Responsibilities:**

- Designed, developed, and maintained enterprise web applications using Angular, TypeScript, .NET Core, .NET Framework, REST APIs, and relational databases, delivering functionality across both frontend and backend layers.
- Designed and built RESTful Web APIs supporting internal application workflows and third-party integrations, improving interoperability across enterprise systems.
- Diagnosed application and production issues spanning frontend, backend, API, and database boundaries, performing SQL query optimization and application-level debugging to improve performance and reliability.
- Delivered third-level (L3) application support, investigating production defects, identifying root causes, and implementing durable fixes while minimizing disruption to end users.
- Resolved AODA/accessibility issues across web and mobile applications, helping ensure accessible, standards-compliant interaction patterns for users with diverse needs.
- Developed and maintained unit tests and broader testing practices to validate functionality, prevent regression, and increase confidence across software releases.
- Participated across the full Agile/Scrum lifecycle: sprint planning, development, testing, code review, deployment support, and production troubleshooting.

**Software Engineer | Zenith Bank Plc****February 2020 – March 2022****Job Responsibilities:**

- Designed, developed, tested, deployed, and maintained business-critical enterprise applications and services using C#, .NET Core, .NET Framework, REST APIs, and relational databases, with a strong emphasis on reliability and maintainability in a regulated banking environment.
- Designed and implemented RESTful API integrations with third-party payment platforms, enabling reliable, secure interoperability between core banking applications and external payment services.
- Collaborated with cross-functional teams throughout requirements analysis, technical design, implementation, testing, and production delivery, translating business requirements into scalable technical solutions.
- Performed application profiling, code performance tuning, and database/query optimization, identifying bottlenecks and materially improving application responsiveness and reliability.
- Developed comprehensive unit tests and testing methodologies to reduce regressions and maintain stability across frequent production releases.
- Conducted regular peer code reviews, promoting readable, maintainable, testable code and consistent engineering standards across the team.
- Mentored junior engineers through technical guidance, code reviews, and hands-on problem-solving, while evaluating emerging technologies and practices to improve team engineering efficiency.

**Job Responsibilities:**

- Developed, maintained, and enhanced core banking and internal enterprise applications using ASP.NET, C#, REST APIs, and SQL Server, supporting business-critical financial operations at scale.
- Designed, developed, tested, and deployed new application features across the full software development lifecycle, translating business requirements into reliable, maintainable technical solutions.
- Provided third-level (L3) production support, debugging complex application and database issues, performing SQL analysis, identifying root causes, and implementing fixes that improved system stability.
- Proactively investigated recurring software defects, implementing corrective changes that improved reliability, maintainability, and end-user experience.
- Designed and developed RESTful API integrations with internal and third-party systems, enabling reliable communication across application and organizational boundaries.
- Collaborated with engineering teams, business users, and external stakeholders throughout requirements analysis, design, development, testing, and deployment.
- Created and maintained technical documentation for software components, integrations, and system changes, supporting knowledge transfer and long-term maintainability.
